

# Sarnia Area Environmental Health Project: Proposed Locations for Health Risk Interpretation

This map provides the proposed locations a health risk calculation and interpretation will be provided for 5 modelled chemicals: sulphur dioxide, benzene, 1,3-butadiene, benzo(a)pyrene and fine particulate matter. Typically, in this type of study, locations such as residential areas (i.e. not specific house address), schools, daycares, hospitals etc. are identified as example locations. If there are other key locations, please let us know at [SAEHP@ontario.ca](mailto:SAEHP@ontario.ca).
